

Flexible Deployment

CYBERHOUND

Specifications

Most companies today deploy the CyberHound solution as a physical on-premise appliance using one of CyberHound's tested appliance range. But we also support VMware (5.0+) and Hyper-V (2012 R2+) for virtualised environments and can recommend appropriate resource requirements.

The CyberHound platform can be hosted in a private or public cloud. We can also offer hosting services and full managed service options as required.

MICRO	H-SERIES
Up to 100 Users	Up to 400 Users
